

Sage Oil Vac

Manufacturers of on-site maintenance equipment

Used Filter Receptacle™

(patent #5884676)

This patented product provides a convenient manner to drain, store, and transport messy used oil filters from the point of service to a point of disposal. Filters are allowed to "hot drain" * by simply placing them on pegs that are incorporated into the Used Filter Receptacle™. The accumulated oil can be evacuated into the used oil tank with the turn of a valve.

* EPA 40 CFR 261.4 (b)(13) excluded oil filters from hazardous waste if a used oil filter is properly "hot drained." Consult EPA 40 CFR for actual language.

Filter Stinger™

(patent #5476154)

The Filter Stinger™ attaches to the evacuation hose and punctures the oil filter before it is removed from the engine. This patented device evacuates the hot, used oil from oil filters, keeping oily messes to a minimum and decreasing burn hazards for technicians.

Barrel Straw

Quickly load your Sage Oil Vac with fresh fluids by utilizing the vacuum process. The Barrel Straw attaches to the top of any new product tank and inserts into any 55-gallon drum or bulk tank, thus allowing the user to quickly vacuum fresh fluids into the tank.

Note:

Tanks may be filled by pouring into the top.

Hose Reels

50 foot spring-retractable hose reels add convenience and productivity to any operation.

Drain Pan

Portable 10 gallon drain pan rolls under cars, trucks or buses to drain oil or antifreeze with ease. All drain pans come with the ability to quick connect to a Sage Oil Vac system.

Quick Disconnect Fittings

Perform hot oil changes in less than half the time as a traditional "drop the plug" process. Outfit your equipment fleet with quick disconnect fittings allowing you to vacuum used oil directly from the engine crankcase into the used oil tank in a 100% enclosed process. Reduced maintenance times and less chance of costly spills allow for a very quick return on investment.

MODEL 51SLT LUBE TRUCK

VERSATILE • DEPENDABLE • PRACTICAL

Sage Oil Vac Lube Truck Equipment

Model 51SLT Lube Truck bed

Features

- 1 80 gallon used fluid tank
- (4) 80 gallon new product tanks – 1 tank is heated
- 500 gallon fuel tank
- 120 lb. 50:1 grease system
- 10 gallon drain pan
- 50' hoses and spring retractable hose reels
- 50' air hose and reel
- Preset digital meters
- 8 HP Honda electric start gas air compressor 20 cfm
- Rollup doors on reel cabinets
- Underbody storage boxes with 22.5 cubic feet of storage space
- Work lights

MODEL 51SLT
LUBE TRUCK

VERSATILE • DEPENDABLE • PRACTICAL

2008 GMC W5500HD diesel truck - 19,500 GVWR

The new **Sage Oil Vac Lube Truck Bed** can fit on the back of Class 5-7 trucks and comes in numerous configurations. The **Sage Oil Vac Lube Truck Bed** features four 80 gallon fresh fluid tanks and one 80 gallon used fluid tank. One new product tank is heated for added convenience. The 51SLT features a 500 gallon fuel tank. The **Sage Oil Vac Lube Truck Bed** also features a

120-pound 50:1 grease system with 50 foot hose and hose reel. A 10 gallon drain pan is included for non-quick connect applications. Rollup doors are standard on the reel cabinets, and inside the cabinets, you will find 50' hoses on spring retractable hose reels and preset digital meters. The **Sage Oil Vac Lube Truck Bed** features our patented 'No Pumps' process of vacuuming used fluids

and pressurizing the fresh fluid tanks. An 8 HP Honda electric start gas air compressor is used to create vacuum and pressure in the tanks. Underbody storage boxes provide 22.5 cubic feet of storage space and are lockable. Work lights located on the reel cabinets allow for evening maintenance routines.
